

## RESION Polyurethane Cast Floor

The RESION PU resin floor is a seamless, poured floor based on polyurethane. Compared to an epoxy resin floor, this floor is slightly elastic, making it feel warmer and more comfortable underfoot. The RESION PU resin floor is aliphatic and therefore UV resistant, even without an extra topcoat. Your floor will therefore not discolor in daylight. This makes the floor particularly suitable for living areas, offices, and other spaces where appearance and comfort are important.

### PROPERTIES

- Slightly elastic and sound-dampening
- UV-resistant (even without a topcoat)
- Seamless and liquid-tight
- Low-maintenance
- Feels warm and comfortable

| Product              | Description | Consumption |
|----------------------|-------------|-------------|
| <b>STAP 1: PRIME</b> |             |             |

EP Floor Primer SF

Primer for porous substrates

300 g/m<sup>2</sup>

EP Floor Primer WB

Primer for non-porous substrates

100-150 g/m<sup>2</sup>

### STAP 2: IMPROVE (optional)

EP Scratch Coat

Epoxy scratch coat

1-3 kg/m<sup>2</sup>

EP Leveling

Epoxy leveling mortar

1,5-4,5 kg/m<sup>2</sup>

### STAP 3: BASE

PU Floor Cast

Polyurethane cast floor

2,3 kg/m<sup>2</sup>

### STAP 4: FINISH

Floor Finish Matt

Polyurethane topcoat with matte finish

80 g/m<sup>2</sup>

TyreProof Finish

Plasticizer-resistant polyurethane topcoat with matte finish

125-150 g/m<sup>2</sup>

### APPLICATIONS

Residential areas

Offices

Showrooms

### COLORS

Available in any RAL color, custom-made for you.
